## Content management for scanners

---

### Information, Document and Workflow Management System

Doxoft Technologies provides web-based information, document management and workflow solutions. Addressing a wide range of needs from personal up to enterprise wide, Doxoft enables organizations of all sizes to implement a world class solution in a cost effective way through it's state of the art architecture and flexible structure.

---

#### Overview

Doxoft is a flexible, easy to implement, easy to use document management / workflow solution which provides comprehensive functionality for organisation of all sizes.

Doxoft Compaq is a purpose built, "plug and play" version of the Doxoft solution that can be purchased with HP Scanners for "Push Button" capturing of your documents and archiving. Doxoft Compaq brings together the benefits of a pre-integrated / pre-configured solution for HP scanners with all the strengths of the Doxoft solution including Web-based architecture, database & operating system independence, scalability, flexibility, low cost of ownership and comprehensive functionality covering the full document lifecycle from capture to archive.

#### How it works

Doxoft Compaq provides pre-built functionality to allow effective compatibility with HP Scanners. A document folder in Doxoft's folder hierarchy can be set as default destination for a profile of an HP Scanner. When a defined scanning profile is selected and scanning is initiated using scanner's buttons, the scanned documents are directly placed in the designated Doxoft folder. Therefore, you can archive your scanned documents by two simple steps; 1) Choose your type of document through the profile buttons on the HP scanner 2) Push to scan button. When you want to locate your document you can either look up your document from the associated folder where your document is automatically placed or use the full text search function Doxoft provides.

#### Benefits

- Very easy document capture without even starting the Doxoft application
- Easy to use document management with comprehensive functionality
- Totally web-based and platform independent solution
- Multi-language support allowing users to concurrently share their documents and collaborate
